LinkedIn | Portfolio | GitHub | Medium

Summary

Cybersecurity enthusiast focused on VAPT, digital forensics, OSINT, and web application security. Active CTF competitor and community instructor with experience in incident response workflows, log analysis, and CTF infrastructure development.

Technical Skills

Offensive:	Penetration Testing, Red Teaming, Web Application Security, Privilege Escalation, OSINT, WordPress Security Assessment, Vulnerability Research
Defensive:	Incident Response, Digital Forensics, Threat Hunting, Log Analysis, SIEM Concepts, Security Monitoring, Malware Analysis Basics, Web Server Forensics
Tools:	Linux, Burp Suite, Metasploit, Wireshark, Nmap, Ghidra, WPScan, Hydra, Gobuster, SQLMap, FFUF, Volatility, Autopsy
Programming:	Python, Bash, C, SQL

Education

Daffodil International University — Dhaka, Bangladesh June 2022 – June 2026
BSc in Software Engineering (Major: Cybersecurity)
CGPA: 3.92

Experience

Contractual Security Consultant — CHOLO BOHUDUR March 2026

Dhaka, Bangladesh

- Conducted VAPT and digital forensic investigation following a security incident response engagement.
- Performed log analysis, WordPress security assessment, and forensic evidence collection/reporting.

Pentest Engineer — Cyber Security Centre Jan 2026 - Present

Daffodil International University

- Performed authorized vulnerability assessments and penetration testing (VAPT) on university digital assets, identifying and reporting security weaknesses.
- Delivered hands-on training sessions on Linux, web application security, OSINT, and penetration testing methodologies.
- Organized Capture The Flag (CTF) competitions and coordinated technical assessments for new member recruitment.

Leadership & Community

Lead Organiser — CSC_Cyberwar CTF 2026

Daffodil International University

- Led infrastructure deployment and platform management for the CTF environment.
- Designed and developed challenges focused on reverse engineering, digital forensics, and binary exploitation.
- Coordinated challenge authors, infrastructure teams, and event operations.

Invigilator & Challenge Contributor — Al-Khwarizmi CTF 2025

Dhaka, Bangladesh

- Assisted in challenge design and competition operations.
- Supported event monitoring and participant coordination during the competition.

Certifications

TryHackMe: Jr. Penetration Tester — TryHackMe | Verify
CCNAv7: Enterprise Networking, Security, and Automation — Cisco | Verify
Certified Web App Penetration Testing Apprentice (KWAPTA) — KnightSquad Academy | Verify
Certified API Security Analyst — APIsec University | Verify

Technical Projects

BlueTracker

- Web-based Bluetooth reconnaissance and proximity-radar system featuring live tactical radar, event streaming, and per-target security dossiers. Architected BlueZ-based device discovery, motion tracking, risk scoring, and capability-driven control for authorized Bluetooth assessment workflows.

ReconLab

- A comprehensive reconnaissance framework for subdomain enumeration, directory discovery, parameter discovery, port scanning, CMS enumeration, vulnerability detection, and OSINT. Architected AI-assisted security analysis, real-time task orchestration, scan tracking, result management, and reporting within a unified web-based platform.

PhishHunter

- A comprehensive cybercrime detection and investigation platform combining machine learning, threat intelligence, phishing reporting, and digital evidence management. Developed role-based workflows for public reporting and law-enforcement investigations with collaborative case management, evidence correlation, chain of custody, OSINT, and AI-assisted analysis.

WebWizard

- Linux-based web security testing platform combining web scraping, domain intelligence, DNS enumeration, XSS, SQL injection, and clickjacking testing with automated reconnaissance workflows in a unified interface.

Password-Analyzer

- Password security analysis platform featuring password strength assessment, entropy calculation, crack-time estimation, secure password generation and privacy-preserving hash-only breach intelligence with in-memory processing, pattern detection, and an interactive dashboard.

Awards & Achievements

CTF Competitions

- 3rd — BDSec CTF 2026
- Finalist — HackerOne BUG HUNT 2026
- Finalist — FlagHunt 2023
- Finalist — CyberRaid CTF 2025
- Finalist — DIU Cybercon CTF 2025

Publications

Ongoing Research

Timing Observability and Leakage Characterisation of a Post-Quantum Hybrid KEM: ML-KEM-768 and BIKE-L1
